

PMG iCollaborate

Streamlining Communication of Information for Real Results

In today's business environment, information is everything, and communicating it in real time is no longer an option if you want to stay ahead of the competition. Employees, partners, customers and prospects expect to be able to get what they need 24/7.

Most businesses, no matter how successful, struggle with internal and external communications. Without a centralized system for managing and delivering information, including broadcast emails, printed materials and independent Web sites, communicating and updating information can be a nightmare, impacting employee productivity, service quality and process consistency.

How do you manage your resources, workflows and data efficiently and within budget without depending on outside vendors or your already overtaxed, IT resources?

Real Solutions: PMG iCollaborate

A comprehensive solution for the centralized management of your organization's people, processes and information, PMG iCollaborate empowers your employees—the true experts within your company—to manage your people, processes and information.

PMG iCollaborate provides a centralized, Web-based foundation that facilitates real-time communication and virtual collaboration amongst internal and external audiences. With PMG iCollaborate as your framework, you can build a true "extended enterprise"—your employees, board members and executives, as well as its business partners, suppliers and even customers can collaborate in real time.

Offering robust administrative functionality via intuitive, Web-based interfaces, PMG iCollaborate lets you manage both the distribution and collection of data in a secure, online environment, allowing your employees to create and deploy their own content and Web applications as needed. System view and edit rights are driven by fully configurable user- and group-based permission settings that allow you to define and control the way each user can interact with site content. Plus, it leverages the latest Microsoft technologies, making it flexible and extensible enough to address your changing Intranet, Extranet and Internet needs.

With a solution configured to your unique needs using PMG iCollaborate, your employees can efficiently manage all aspects of communication within budget and without having to depend on outside help.

PMG iCollaborate provides the following benefits:

- ❖ A highly functional and flexible database-driven system that allows users to access, publish, submit and collect business data from a single location
- ❖ A centralized, database-driven repository for enterprise-wide business knowledge, facilitating simple and accurate reporting on data and trends in real time
- ❖ Robust search functionality that enables users to locate desired information quickly and easily
- ❖ An adaptable system that can be easily configured to address a full range of Intranet, Extranet and Internet content and functionality needs
- ❖ Ability to publish Web-based content and workflow applications directly through simple interfaces, reducing IT costs and increasing efficiency
- ❖ A wide variety of preconfigured content templates to address common formatting needs, increasing development efficiency

System Features Include:

- Industry standard, XML-based data storage for maximum flexibility
- Flexible User Interface utilizing Cascading Style Sheets (CSS) and Extensible Stylesheet Language (XSL) to support virtually any customized "look and feel," layout format or navigation model
- Simple, powerful content creation and management features— add, edit, delete, move, and secure content
- Support for links and multiple file attachment formats within content (including images, documents, audio/video clips, etc.)
- Content templates to enable the creation of "Dynamic Forms" for the collection and distribution of data submissions and file uploads
- Content templates to support task status management, with e-mail notifications
- Calendar module to support events management
- Auto-publish and auto-expire dates for content (Post/Remove Dates)
- Version Control - file and content locking for simultaneous editing control
- Content Search / Document Search - keyword, phrase, and substring (content search within only those areas for which the user has been granted access rights)
- Support for content publishing to wireless devices (Windows CE, Palm)
- Integration points for mobile workforce wireless device content synchronization

Real results: increased collaboration, consistency, efficiency and security

By implementing PMG iCollaborate across the enterprise, you can realize both short-term and long-term results.

Robust user permission system

Through a robust user permission system, Web content development and management responsibilities can be distributed as needed throughout an organization, while ensuring consistent display presentation and usability. The system supports multiple user levels, ranging from read-only rights to full system administrative access, and offers 23 separate permission rights that can be configured to accommodate any specific, desired user security role.

Rapid deployment of content and workflow applications

Because all portal content, whether static or dynamic form-based, is maintained through simple, intuitive administrative interfaces, authorized users are able to rapidly develop and launch their own content or even workflow applications, without having to rely on internal or external IT resources.

Task management support for better project management

In addition to its distributed content publishing and dynamic form capabilities, PMG iCollaborate also supports task management within content to facilitate project management, and offers a corporate calendar feature for events management, further enabling an organization to manage its people, processes and information from a single, centralized location. 

A recent study conducted by Line56 Research reported that 73.3 percent of IT executives would prefer a single, cross-enterprise infrastructure for on-line information management and delivery.
